Electronic Commerce 2018 Efraim Turban 2017-10-12 This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-

based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

The absolute first associations between computers almost fifty years prior have been changed into a flood of network that covers the planet. New innovations in technology and devices have given us more approaches to tackle the intensity of network any place we proceed to have given us usefulness we would never have imagined. Online networking, mobile computing, analytics, examination, the advanced mobile phone, tablets, Cloud figuring. The movements in innovation are huge and all are empowering agents for a revolution affecting business at this moment. Digital transformation needs every one of us to contemplate how we can turn into an ace of digitization instead a victim. Digital transformation is basic for all organizations, from the little to the enterprise. That message comes through loud and

clear from apparently every keynote, board discourse, article, or concentrate identified with how organizations can stay focused and applicable as the world turns out to be progressively digital. What's uncertain to numerous business chiefs is the thing that digital transformation means. Is it only a snappy method to express moving to the cloud? What are the particular advances we have to take? Do we have to structure new openings to assist us with making a system for advanced change, or contract a counseling administration? What parts of our business methodology need to change? Is it extremely justified, despite all the trouble? Digital transformation drives the combination of on the web and disconnected, problematic innovations and the extreme difference in whole enterprises. Automation, optimization, self-sufficiency of procedures just as greater adaptability and distinction of items and services are only a portion of the advantages and chances of digitalization. The procedure additionally prompts creative plans of action and advanced items. The most well-known drivers of progress are expanded client desires and competition in the market.
