Innovative Methods of Marine Ecosystem Restoration Thomas J. Goreau 2012-12-04 Innovative Methods of Marine Ecosystem Restoration offers a ray of hope in an increasingly gloomy scenario. This book is the first presentation of revolutionary new methods for restoring damaged marine ecosystems. It discusses new techniques for greatly increasing the recruitment, growth, survival, and resistance to stress of marine ecosystems, fis

Marine Protected Areas John Humphreys 2019-10-22 Marine Protected Areas: Science, Policy and Management addresses a full spectrum of issues relating to Marine Protected Areas (MPAs) not currently available in any other single volume. Chapters are contributed by a wide range of working specialists who examine conceptions and definitions of MPAs, progress on the implementation of worldwide MPAs, policy and legal variations across MPAs, the general importance of coastal communities in implementation, and the future of MPAs. The book constructively elucidates conflicts, issues, approaches and solutions in a way that creates a balanced consideration of the nature of effective policy and management. Those in theory, designation, implementation or management of MPAs, from individuals, marine sector organizations, and university and research center libraries will find it an important work. Provides a much needed 'one stop shop' for information on Marine Protected Areas Presents chapters from a diverse group of contributors, enabling a broad and deep perspective Includes case studies throughout, providing real-life examples and best practice recommendations

Nitrogen in the Marine Environment Edward J. Carpenter 2016-10-27 Nitrogen in the Marine Environment provides information pertinent to the many aspects of the nitrogen cycle. This book presents the advances in ocean productivity research, with emphasis on the role of microbes in nitrogen transformations with excursions to higher trophic levels. Organized into 24 chapters, this book begins with an overview of the abundance and distribution of the various forms of nitrogen in a number of estuaries. This text then provides a comparison of the nitrogen cycling of various ecosystems within the marine environment. Other chapters consider chemical distributions and methodology as an aid to those entering the field. This book discusses as well the enzymology of the initial steps of inorganic nitrogen assimilation. The final chapter deals with the philosophy and application of modeling as an investigative method in basic research on nitrogen dynamics in coastal and open-ocean marine environments. This book is a valuable resource for plant biochemists, microbiologists, aquatic ecologists, and bacteriologists.

A Marine Division in Nightmare Alley Anthony J. Campigno 2017-07-19 First published in 1958, A Marine Division in Nightmare Alley is a brief but gripping narrative of the author's experiences as a young U.S. Marine during the Korean conflict. Beginning with his enlistment at age 17, his training at Camps Lejeune and Pendleton, to his landing at Pusan and subsequent combat (including action at Hagaru-ri and the Chosin Reservoir), the book provides a firsthand account of the fierce fighting and bitter cold faced by the author and his fellow Marines.

Marine Mammals and Noise W. John Richardson 2013-10-22 Many marine mammals communicate by emitting sounds that pass through water. Such sounds can be received across great distances and can influence the behavior of these undesera creatures. In the past few decades, the oceans have become increasingly noisy, as underwater sounds from propellers, sonars, and other human activities make it difficult for marine mammals to communicate. This book discusses, among many other topics, just how well marine mammals hear, how noisy the oceans have become, and what effects these new sounds have on marine mammals. The baseline of ambient noise, the sounds produced by machines and mammals, the sensitivity of marine mammal hearing, and the reactions of marine mammals are also examined. An essential addition to any marine biologist's library, Marine Mammals and Noise will be especially appealing to marine mammalogists, researchers, policy makers and regulators, and marine biologists and oceanographers using sound in their research.

Marine Mammals Annalisa Berta 2005-12-14 Berta and Sumich have succeeded yet again in creating superior marine reading! This book is a succinct yet comprehensive text devoted to the systematics, evolution, morphology, ecology, physiology, and behavior of marine mammals. The first edition, considered the leading text in the field, is required reading for all marine biologists concerned with marine mammals. Revisions include updates of citations, expansion of nearly every chapter and full color photographs. This title continues the tradition by fully expanding and updating nearly all chapters. Comprehensive, up-to-date coverage of the biology of all marine mammals Provides a phylogenetic framework that integrates phylogeny with behavior and ecology Features chapter summaries, further readings, an appendix, glossary and an extensive bibliography Exciting new color photographs and additional distribution maps *Marine Algae of California* Isabella A. Abbott 1992-08-01 This is a complete, systematic treatment of the marine algae (seaweeds) flora of California. The 726 species treated are each illustrated by a detailed line drawing made from an actual specimen. The two authors have drawn upon their phyiological research to offer a definitive representation of benthic marine algae from the Californian coast. The floristic treatment in this first paperback edition should aid accurate and speedy identification of flora due to the improved keys, descriptions, illustrations and more detailed coverage of taxa, and should enhance the reader's knowledge of Californian macro-algae.

Geochemistry of Marine Sediments David J. Burdige 2020-08-04 The processes occurring in surface marine sediments have a profound effect on the local and global cycling of many elements. This graduate text presents the fundamentals of marine sediment geochemistry by examining the complex chemical, biological, and physical processes that contribute to the conversion of these sediments to rock, a process known as early diagenesis. Research over the past three decades has uncovered the fact that the oxidation of organic matter deposited in sediment acts as a causative agent for many early diagenetic changes. Summarizing and discussing these findings and providing a much-needed update to Robert Berner's Early Diagenesis: A Theoretical Approach, David J. Burdige describes the ways to quantify geochemical processes in marine sediment. By doing so, he offers a deeper understanding of the cycling of elements such as carbon, nitrogen, and phosphorus, along with important metals such as iron and manganese. No other book presents such an in-depth look at marine sediment geochemistry. Including the most up-to-date research, a complete survey of the subject, explanatory text, and the most recent mathematical formulations that have contributed to our greater understanding of early diagenesis, Geochemistry of Marine Sediments will interest graduate students of geology, geochemistry, and oceanography, as well as the broader community of earth scientists. It is poised to become the standard text on the subject for years to come.

13 Cent Killers John Culbertson 2007-12-18 "It's not easy to stay alive with a \$1,000 bounty on your head." In 1967, a bullet cost thirteen cents, and no one gave Uncle Sam a bigger bang for his buck than the 5th Marine Regiment Sniper Platoon. So feared were these lethal marksmen that the Viet Cong offered huge rewards for killing them. Now noted Vietnam author John J. Culbertson, a former 5th Marine sniper himself, presents the riveting true stories of young Americans who fought with bolt rifles and bounties on their heads during the fiercest combat of the war, from 1967 through the desperate Tet battle for Hue in early '68. In spotter/shooter pairs, sniper teams accompanied battle-hardened Marine rifle companies like the 2/5 on patrols and combat missions. Whether fighting their way out of a Viet Cong "kill zone" or battling superior numbers of NVA crack troops, the sniper teams were at the cutting edge in the art of jungle warfare, showing the patience, stealth, combat marksmanship, and raw courage that made the unit the most decorated regimental sniper platoon in the Vietnam War. Harrowing and unforgettable, these accounts pay tribute to the heroes who made the greatest sacrifice of all-and leave no doubt that among 5th Marine snipers uncommon valor was truly a common virtue.

The US Marines in World War II J. Michael Wenger 2020-01-09 This edition represents a thoroughly written history of Marines' military campaigns in Europe, Africa and the Pacific during the Second World War. Marines played a central role in the Pacific War, along with the U.S. Army. The battles of Guadalcanal, Bougainville, Tarawa, Guam, Tinian, Cape Gloucester, Saipan, Peleliu, Iwo Jima, and Okinawa saw fierce fighting between Marines and the Imperial Japanese Army. By the end of the war, the Corps expanded from two brigades to six divisions, five air wings and supporting troops, totaling about 485,000 Marines. In addition, 20 defense battalions and a parachute battalion were raised. Nearly 87,000 Marines were casualties during World War II, and 82 were awarded the Medal of Honor. Contents: Origin of the Marine Corps The Marine Corps on the Eve of War Marines Defending American Soil Pearl Harbor Battle of Wake Island Marines Campaign in Europe and Africa Europe and North Africa Defense of Iceland Marines Campaign in the Pacific Rim Defense of the Philippines Solomon Islands Campaign Guadalcanal Campaign Marshall Islands Campaign Battle of Tarawa Battle of Cape Gloucester Battle of Saipan Battle of Guam Battle of Peleliu Battle of Tinian Liberation of the Philippines Marines Campaign in Japan Battle of Iwo Jima Battle of Okinawa Occupation of Japan

Complete Guide to Diesel Marine Engines John Fleming 2000 If you want to better understand the big iron toiling under the deck of your sportfish, pick up a copy of the Complete Guide To Diesel Marine Engines by John Fleming. The book takes you through the ins and outs of diesel power in terms even a landlubber could understand. It explains the hows and whys of diesel engines, but there's also a chapter on the basics of trouble-shooting and another on selecting the right engine for your boat. For the die-hard, there's even a chapter on the mathematics of diesels. If you want a solid understanding of how a diesel operates, this is one hands-on guide to bring aboard.

Marine Carbon Biogeochemistry Jack J. Middelburg 2019-01-25 This open access book discusses biogeochemical processes relevant to carbon and aims to provide readers, graduate students and researchers, with insight into the functioning of marine ecosystems. A carbon centric approach has been adopted, but other elements are included where relevant or needed. The book focuses on concepts and quantitative understanding of primary production, organic matter mineralization and sediment biogeochemistry. The impact of biogeochemical processes on inorganic carbon dynamics and organic matter transformation are also discussed.

Sergeant Major, U. S. Marines Bruce H. Norton 2013-09-23 "The story of Sergeant Major Maurice Jacques is the story of a true warrior. With close to fifty months of combat in Korea and Vietnam, he's one of that rare breed, men who have looked the Devil in the eye?for a long time?and never blinked!"-?LtCol. Oliver North, USMC (Ret.) COMBAT AND DEATH, SACRIFICE AND HONOR Maurice Jacques served for thirty years with the U.S. Marine Corps, nearly six of them in combat. As an accomplished infantryman, parachutist, recon patrolter, marksman, combat swimmer, and record-setting drill instructor, Jacques personifies the hard-fought, hard-won legacy of the Marines. With the help of Bruce Norton, he recounts the lessons learned in blood and the courage tested under fire?from the razor-backed hills and icy cold of Korea to the steamy, Vietcong-infested jungles of Nam. In this tough, gripping narrative, he reveals the emotion and chaos of close combat and the sacrifice and valor that have made the Marines legendary worldwide. During his long, dynamic career, Jacques held the position of regimental sergeant major in three different commands and was awarded two Bronze Stars and a Purple Heart. Maurice Jacques is a true warrior, as distinctive and exceptional as the Marines. He was expected to train harder, fight harder, sacrifice more, and is forever proud to be part of the pain, the pride, and the triumph that is USMC. "Doc Norton . . . has done it again. This time, Doc has helped his old diving partner, retired Sergeant Major Maurice Jacques, turn out one of the finest military autobiographies you're ever likely to read . . . You'd be foolish to pass this one up."--Ken Miller, vietnamgear.com

Keeping Faith John Schaeffer 2003-12-15 In 1998, Frank Schaeffer was a bohemian novelist living in "Volvo driving, higher-education worshipping" Massachusetts with two children graduated from top universities. Then his youngest child, straight out of high school, joined the United States Marine Corps. Written in alternating voices by eighteen-year-old John and his father, Frank, Keeping Faith takes readers in riveting fashion through a family's experience of the Marine Corps: from being broken down and built back up on Parris Island (and being the parent of a child undergoing that experience), to the growth of both father and son and their separate reevaluations of what it means to serve. From their realization that among his fellow soccer dads "the very words 'boot camp' were pejorative, conjuring up 'troubled youths at risk'" ("But aren't they all terribly southern?" asked one parent") to John's learning that "the Marine next to you is more important than you are," Keeping Faith — a New York Times bestseller — is a fascinating and personal examination of issues of class, duty, and patriotism. The fact that John is currently serving in the Middle East only adds to the impact of this wonderfully written, timely, and moving human interest story.

Tail End Charlie Ronald John Jensen 2003-11-07 "The story begins with Jensen as a young man in New York in the 1960s, who, following in his brother's footsteps, decides to join the Marines in hopes of finding himself. Early chapters discuss his experiences in boot camp and his combat training at Camp Lejeune.

Marine Maxims Col. Thomas J. Gordon, USMC (Ret.) 2021-11-15 Marine Maxims is a collection of fifty principle-based leadership lessons that Thomas J. Gordon acquired commanding Marines over a career spanning three decades of service. Dealing with the complexities and challenges of the contemporary operating environment requires an internal moral compass fixed true. These maxims focus on developing inner citadels of character, moral courage, and the resilience to persevere in a contested domain where information is key. Its purpose is to provide future leaders with a professional development plan that will steel their resolve and enable them to lead with honor. Thematically, these maxims build upon a foundation of character, courage, and will. To be effective, a leader must model and inspire the will to persevere in the face of danger or adversity. The essence of effective leadership is credibility. A leader's credibility is derived from a congruence of competence and character. Exceptional leaders are not remembered for what they accomplished, but how they did it. Those that lead with integrity will be remembered as a leader worth following.

Biogeochemistry of Marine Dissolved Organic Matter Dennis A. Hansell 2014-10-02 Marine dissolved organic matter (DOM) is a complex mixture of molecules found throughout the world's oceans. It plays a key role in the export, distribution, and sequestration of carbon in the oceanic water column, posited to be a source of atmospheric climate regulation. Biogeochemistry of Marine Dissolved Organic Matter, Second Edition, focuses on the chemical constituents of DOM and its biogeochemical, biological, and ecological significance in the global ocean, and provides a single, unique source for the references, information, and informed judgments of the community of marine biogeochemists. Presented by some of the world's leading scientists, this revised edition reports on the major advances in this area and includes new chapters covering the role of DOM in ancient ocean carbon cycles, the long term stability of marine DOM, the biophysical dynamics of DOM, fluvial DOM qualities and fate, and the Mediterranean Sea. Biogeochemistry of Marine Dissolved Organic Matter, Second Edition, is an extremely useful resource that helps people interested in the largest pool of active carbon on the planet (DOC) get a firm grounding on the general paradigms and many of the relevant references on this topic. Features up-to-date knowledge of DOM, including five new chapters The only published work to synthesize recent research on dissolved organic carbon in the Mediterranean Sea Includes chapters that address inputs from freshwater terrestrial DOM

Kentucky Marine David J. Bettez 2014-01-01 A native of Hopkinsville, Kentucky, Major General Logan Feland (1869–1936) played a major role in the development of the modern Marine Corps. Highly decorated for his heroic actions during the battle of Belleau Wood in World War I, Feland led the hunt for rebel leader Augusto César Sandino during the Nicaraguan revolution from 1927 to 1929 -- an operation that helped to establish the Marines' reputation in guerrilla warfare and search-and-capture missions. Yet, despite rising to become one of the USMC's most highly ranked and regarded officers, Feland has been largely ignored in the historical record. In *Kentucky Marine*, David J. Bettez uncovers the forgotten story of this influential soldier of the sea. During Feland's tenure as an officer, the Corps expanded exponentially in power and prestige. Not only did his command in Nicaragua set the stage for similar twenty-first-century operations in Iraq and Afghanistan, but Feland was one of the first instructors in the USMC's Advanced Base Force, which served as the forerunner of the amphibious assault force mission the Marines adopted in World War II. Kentucky Marine also illuminates Feland's private life, including his marriage to successful soprano singer and socialite Katherine Cordner Feland, and details his disappointment at being twice passed over for the position of commandant. Drawing from personal letters, contemporary news articles, official communications, and confidential correspondence, this long-overdue biography fills a significant gap in twentieth-century American military history.

The Marine Rudy Josephs 2007-11-01 Following a rescue mission in Afghanistan, discharged marine John Triton returns home to South Carolina and into the loving arms of his wife, Kate. Though happy to be home, Triton soon discovers that adjusting to a 'normal life' doesn't come easy for him. In fact, suppressing his intense training and strong survival instincts may be the greatest challenge he has ever faced. That is, until a camping trip to the mountains results in an unfortunate encounter with five ruthless killers on the run, and Kate becomes their unwilling hostage. Left for dead, Triton relentlessly pursues his quarry deep into backwoods country, determined to get his wife back safely at any and all costs. But he's wounded, unarmed, and outnumbered. All he has left are his wits and an almost-animalistic rage that made him an unstoppable killing machine in the frontlines overseas. The marine is waging a new war, and his enemies have no idea how much trouble they're in...

China Horse Marine E. Richard Bonham 2015-06-28 Every Marine has heard stories about the legendary China Marines who served in China before the Second World War. Many of these stories feature the small group of Horse Marines stationed at the American Legation in Peiping who patrolled the city streets and the surrounding Chinese countryside. Riding small, tough, Mongolian ponies and armed with their Model 1913 Patton sabres, these Horse Marines protected American missionaries and businessmen from bands of roving Chinese bandits. The Horse Marines, known as the Mounted Detachment, were considered to be the elite of all China Marines. Illustrated with over 420 rare and previously unpublished Horse Marine items and photographs, including drawings and watercolours by Colonel John W Thomason, this book offers a unique perspective into the life of John R Angstadt, one China Horse Marine.

Biogeography and Adaptation Geerat J. Vermeij 1978 The driving forces of natural selection leave their traces in the shapes of living creatures and their patterns of distribution. In this thoughtful and wide-ranging discussion of evolutionary process and adaptive response, Geerat Vermeij elucidates the general principles that underlie the great diversity of marine forms found in the world's great oceans.

Loon Jack McLean 2010-05 Nothing could have prepared privileged-boy Jack McLean for the horror of Landing Zone Loon--a three-day battle that took place on a remote hill tucked into the border of North Vietnam and Laos in June 1968, killing twenty-seven men, wound nearly one hundred others, and leave several dozen survivors to defend an ever-shrinking perimeter with little water or ammo. A powerful coming-of-age portrait that defines some of the most tumultuous events in our history, both in Vietnam and back home.

Marine Composites Richard Pemberton 2018-08-20 Marine Composites: Design and Performance presents up-to-date information and recent research findings on the application and use of advanced fibre-reinforced composites in the marine environment. Following the success of their previously published title: Marine Applications of Advanced Fibre-reinforced Composites which was published in 2015; this exemplary new book provides comprehensive information on materials selection, characterization, and performance. There are also dedicated sections on sandwich structures, manufacture, advanced concepts, naval architecture and design considerations, and various applications. The book will be an essential reference resource for designers, materials engineers, manufacturers, marine scientists, mechanical engineers, civil engineers, coastal engineers, boat manufacturers, offshore platform and marine renewable design engineers. Presents a unique, high-level reference on composite materials and their application and use in marine structures Provides comprehensive coverage on all aspects of marine composites, including the latest advances in damage modelling and assessment of performance Contains contributions from leading experts in the field, from both industry and academia Covers a broad range of naval, offshore and marine structures

The Run-Up to the Punch Bowl John Nolan 2006-08-23 The noted author and literary scholar, Samuel Hynes, has remarked that there has been no great book on the Korean War, a significant gap in American military letters. It may be hoped that this account will help to meet at least part of that challenge. This is a narrative of John Nolan's experience as a Marine rifle platoon leader in Korea in 1951, the pivotal year of the Korean War. Much of it reads like a journal, but it also includes the experiences of a half-dozen other Marine lieutenants fighting through the fog-shrouded mountains of the East-Central front during the year the war turned around. Individually, their heroism marked some of the top combat events of that time. Taken together, these accounts tell the story of fighting that year when the last Chinese offensive was stopped cold and the UN forces slugged their way back over the 38th parallel to the final line that exists today, more than a half century later. The lieutenants came from all over and were educated at the Naval Academy, Notre Dame, Miami University and College of the Pacific. As Marine rifle platoon leaders, they were all wounded, some several times, and abundantly decorated. And since Korea, their lives have spanned a broad range of experience. Charlie Cooper retired as Commanding General, Fleet Marine Force, Pacific; Joe Reed was a top executive at AT&T and later led the reorganization of Chicagos public schools; Jim Marsh left his enduring mark on the Marine Corps and the vast new USMC building at Quantico is named for him; Walter Murphy, a leading educator, author and novelist, was the McCormick Professor of Jurisprudence at Princeton; Bill Rocky had a distinguished Marine Corps career, as did his father before him; Eddie LeBaron was vorked early into the Colledge Football Hall of Fame and later led the NFL in passing during his years with the Washington Redskins and the Dallas Cowboys. John Nolan has practiced law in Washington, D.C. since shortly after returning from Korea. What People Are Saying Great book! John Nolan has written a magnificent account of the Marines in action during the Korean War. It is a story about the Marine spirit and ethos. Every American should read this with pride in the Corps of Marines. General Anthony C. Zinni, USMC (Ret.) Its a wonderful book. The writing is superb; it flows, its moving, highly descriptive and strikes just the right tone neither laconic nor emotional. Every Marine should read it. Haynes Johnson, Journalist, Author This is a book about Marines, ordinary Americans who under unimaginable pressures do the extraordinary day after day. You will laugh. You will cry. And after reading John Nolans memoir, you will have a far more profound understanding of the barbarity of war. Mark Shields, Columnist; Commentator, The NewsHour John Nolans timeless story of men in battle during the heavy fighting in Korea, 1951, bears all the marks of a classic good men, hard men, decent men in brutal, near-constant combat. What they accomplished in those battles would be reflected later in their lives those who kept them as any would become highly successful in the Marine Corps and in other careers. Colonel John W. Ripley, USMC (Ret.) (The Bridge at Dong Ha) John Nolan learned about leadership the hard way leading a Marine rifle platoon in close combat in Korea. He is modest, honest and tough. And his memoir is a compelling read. Evan Thomas, Newsweek If you dont know how a few good Marines helped prevent the Korean War from becoming the worlds most dangerous war, then join Lt. John Nolans 1st Platoon, Baker Co., 1stBn, 1st Marine, 1st MarDiv. The Run-Up to the Punch Bowl is a clear-eyed, gritty, rich day-by-day account of what makes Marines go up the hill.

Citizen Science for Coastal and Marine Conservation John A. Cigliano 2017-10-31 In recent years, citizen science has emerged as a powerful new concept to enable the general public, students, and volunteers to become involved in scientific research. A prime example is in biodiversity conservation, where data collection and monitoring can be greatly enhanced through citizen participation. This is the first book to provide much needed guidance and case studies from marine and coastal conservation. The novelty and rapid expansion of the field has created a demand for the discussion of key issues and the development of best practices. The book demonstrates the utility and feasibility, as well as limitations, of using marine and coastal citizen science for conservation, and by providing critical considerations (i.e. which questions and systems are best suited for citizen science), presents recommendations for best practices for successful marine and coastal citizen science projects. A range of case studies, for example, on monitoring of seabird populations, invasive species, plastics pollution, and the impacts of climate change, from different parts of the world, is included. Also included are discussions on engaging youth, indigenous communities, and divers and snorkelers as citizen scientists, as well as best practices on communication within citizen science, building trust with stakeholders, and informing marine policy as part of this exciting and empowering way of improving marine and coastal conservation. .

Arc Marine Dawn J. Wright 2007 Authors of the book Arc Marine discuss results of a successful effort to create and define a data model for academic, government, military, and private oceanographers, resource managers, conservationists, geographers, nautical archaeologists, and analysts and managers of marine applications. Arc Marine is the perfect starting point for the intermediate marine student as well as a resource for the marine GIS expert. At a time when health of our oceans is seen as crucial to our existence, marine researchers have developed a data model that supports sea floor mapping, fisheries management, marine mammal tracking, monitoring shoreline change, and water temperature analysis. This book enables marine professionals to do better work.

Chemistry in the Marine Environment R E Hester 2007-10-31 The oceans cover more than 70% of the earth's surface to an average depth of almost 4000 metres. It is therefore not surprising that exchanges that occur between ocean and atmosphere exert major influences on the global climate. In addition, there is great variety within the expanses of the ocean, including large temperature differences, and enormous biodiversity brought about by the great chemical diversity within the marine environment. Written by international experts in the field, Chemistry in the Marine Environment offers a multidisciplinary and authoritative review of this important topic. Included is a review of the opportunities and challenges in developing new pharmaceuticals from the sea and an examination of contamination and pollution in the marine environment, which is a cause of great concern world-wide. The international perspective of this book will engage the interest and attention of a wide readership, from chemical oceanographers to policymakers, from students in environmental science to those in oceanography programmes.

Encyclopedia of Marine Mammals William F. Perrin 2009-02-26 This thorough revision of the classic Encyclopedia of Marine Mammals brings this authoritative book right up to-date. Articles describe every species in detail, based on the very latest taxonomy, and a host of biological, ecological and sociological aspects relating to marine mammals. The latest information on the biology, ecology, anatomy, behavior and interactions with man is provided by a cast of expert authors -- all presented in such detail and clarity to support both marine mammal specialists and the serious naturalist. Fully referenced throughout and with a fresh selection of the best color photographs available, the long-awaited second edition remains at the forefront as the go-to reference on marine mammals. More than 20% NEW MATERIAL includes articles on Climate Change, Pacific White-sided Dolphins, Sociobiology, Habitat Use, Feeding Morphology and more Over 260 articles on the individual species with topics ranging from anatomy and behavior, to conservation, exploitation and the impact of global climate change on marine mammals New color illustrations show every species and document topical articles FROM THE FIRST EDITION "This book is so good...a bargain, full of riches...packed with fascinating up to date information. I recommend it unreservedly to individuals, students, and researchers, as well as libraries." --Richard M. Laws, MARINE MAMMALS SCIENCE "...establishes a solid and satisfying foundation for current study and future exploration" --Ronald J. Shusterman, SCIENCE
